plastics

Our new plastic mugs are designed to withstand not only everyday use but also more major knocks and drops which may break a ceramic mug. Not only are the mugs more durable but they come in a range of 27 different colours, from refined black and white through to more vibrant colours like neon orange and sparkly purple. With this broad range of base colours it is possible to find a colour to suit your business and style, whether you want to shout your message from the rooftops or announce it quietly.

The plastic mugs are not fired in a traditional kiln like the ceramics, the printed colours are cured using UV lamps. This process allows for far more vibrant colours than ceramics and almost any Pantone colour can be printed. Not only that but due to the speed of the curing process, we are able to offer unlimited print colours on Fast Track orders.

Classic
